-

PROFESSIONAL EXPERIENCE

Tech Associate

Mayan Solutions

September 2024 - Present

Project: Golden Haven Memorial Park Website

- Contributed to the redesign of Golden Haven's website using Wordpress, Vue, and PHP, supporting online sales and content distribution across 30+ branches nationwide.
- Improved customer conversion by streamlining the purchase workflow from 27 steps to 7, significantly reducing buyer friction and time to complete transactions.
- Enabled automated customer contract generation by converting purchase data into downloadable PDFs, improving post-purchase experience.

Project: HR Analytics Platform

- Built a full-stack wellbeing HR analytics platform using React, NestJs, Supabase, and Digital Ocean, supporting surveys and company-level wellbeing insights.
- Automated survey workflows and scoring logic, replacing manual Google Forms processes with computed domain scores and personalized tips.
- Implemented analytics dashboards for admins, including wellbeing trends, company vs. norm comparison, department-level metrics, and participation rates.

Project: Reverse Vending Machine Backend

- Designed and built a backend API for Reversed Vending Machine using NestJS, Supabase, and Prisma, enabling centralized capture and management of machine transaction data.
 - Enabled third-party integrations by exposing transaction data to external partners a bank collaboration (BPI) that converts RVM bottle deposits into reward points for the Vybe app.
 - Implemented automated weekly transaction reporting to client servers, supporting reward disbursement workflows and making the platform extensible for future integrators.
-

EDUCATION

Eulogio "Amang" Rodriguez Institute of Science and Technology

BS Computer Science (October 2020 - September 2024)
